

## Online Data Sources - iOS

Airports uses several online sources to supply users with weather, Notam and satellite images. These are:

For Weather: ADDS Text Data Server and AviationWeather.gov

For Notams: U.S. FAA and SIA France

For Satellite Images: iOS Standard and Google Maps

Each item uses only one source at any given time. Switching between sources is done manually by the user.

### **How to switch sources:**

- Open the General settings on your iPhone or iPad (cogwheel icon)
- Scroll down and find the Airports icon. Tap it to open.
- Scroll down and find Online Data Sources.
- Tap Weather/Notams/Satellite Images. This will open a new page.
- Select the source you want to use.
- Close the General settings and open Airports using the new source(s).

### **Why switch sources:**

There are a number of reasons why the user would want to switch sources. The main one is that the data from one source is unreliable or unavailable. Usually this will be accompanied by an error message.

### **When switching sources still gives an error message:**

Contact our [support](#) for further investigation making sure to include device type and operating system.
